

## Inspirational *Workspace Unit*

for the artist in quest of solitude

Basic construction unit :

- 1 FAKRO Arc Roof Window converted into a facade element.
- 1 ETFE transparent Pneumatic cushion used as a tensile roof
- 1 Structural Rib assuring the articulation between the arc windows elements as well as the structural support of the building

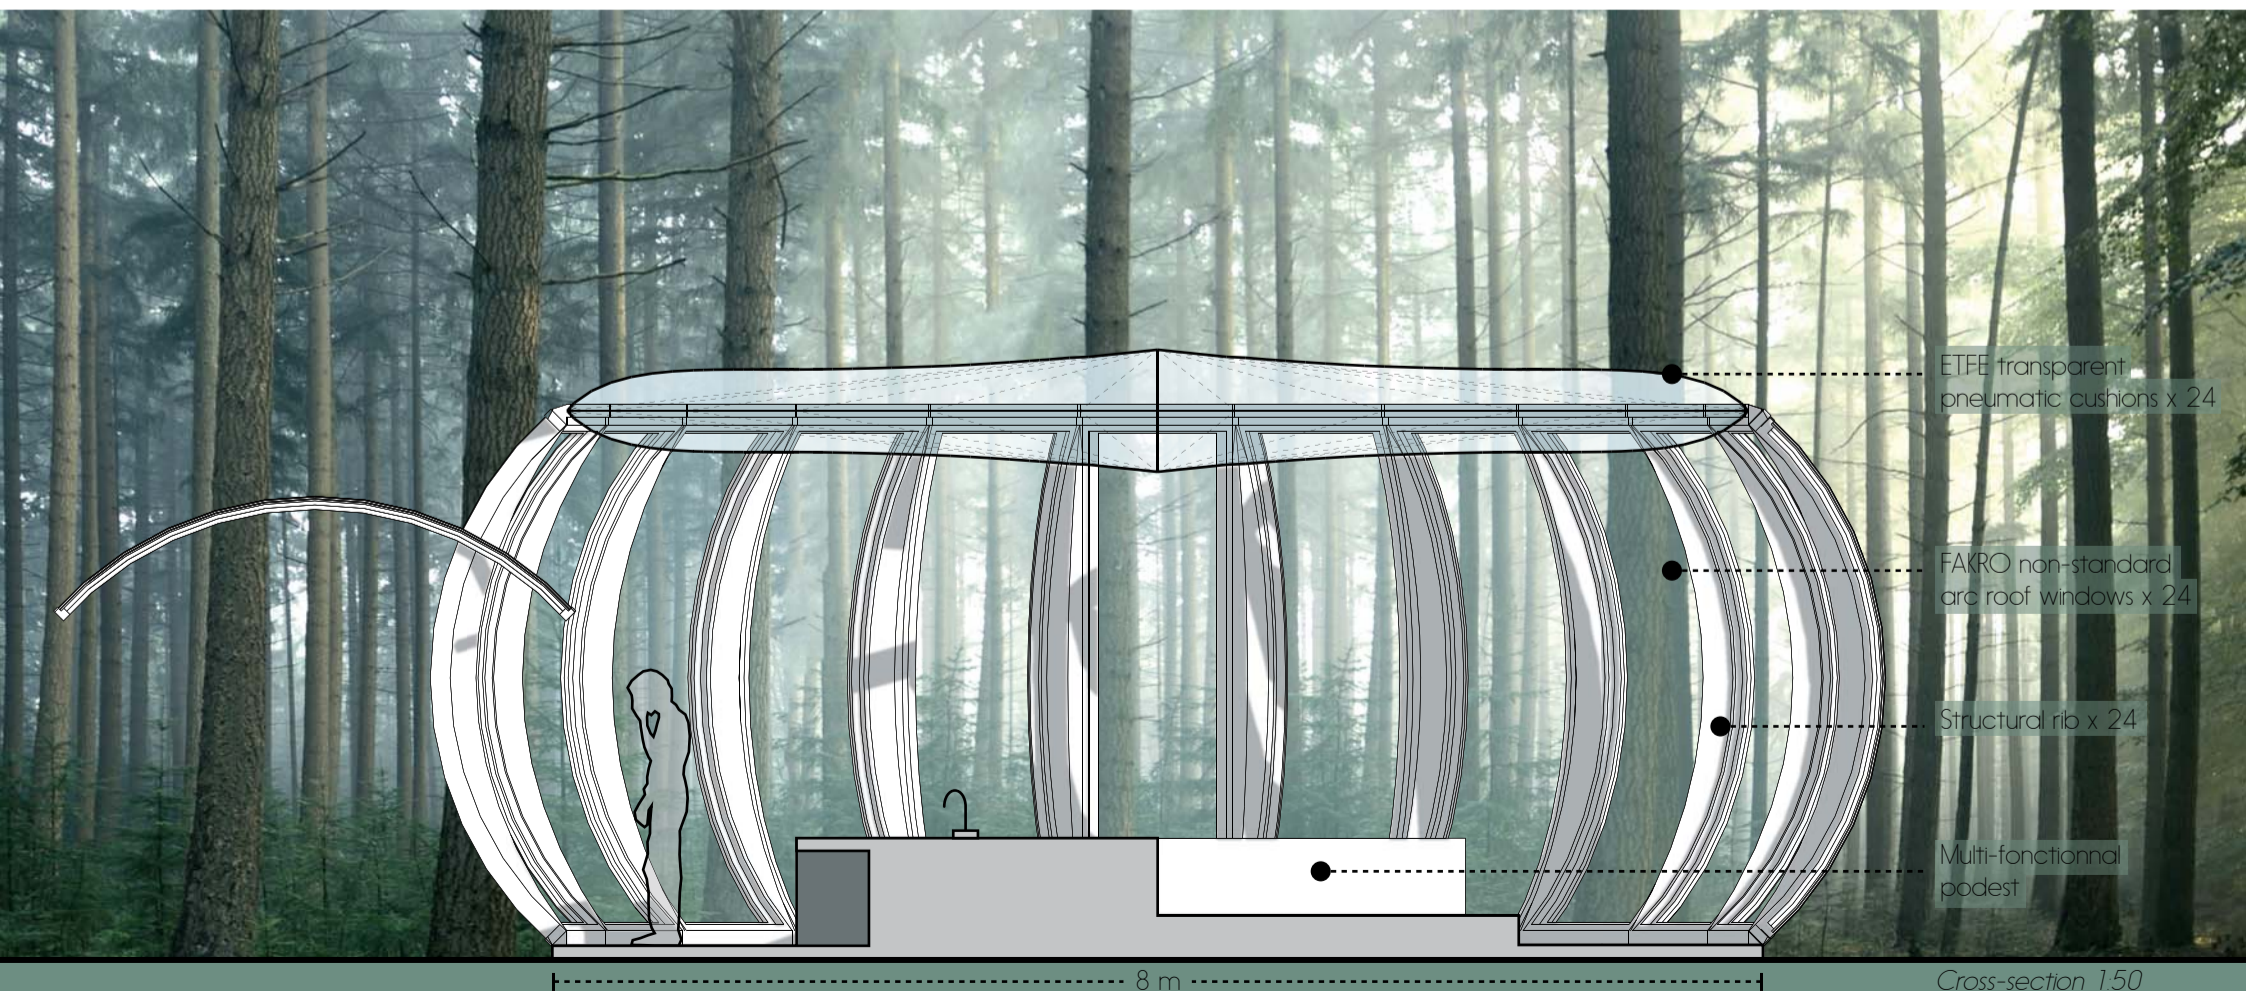

The atelier is a simple array of 24 basic units installed on a platform which furnishes the workspace by supplying for all the basic functions (sitting, eating, sleeping, creating..).

IWU is an atelier hosting one artist at a time to experience the solitude in the nature. It's a flexible space, able to stimulate artists of all disciplines to work around the themes of landscape and environment.

The round shape and the reflectivity of the curved glass makes it blend with its surroundings. The Fakro facade and the transparent ETFE roof provide the maximum amount of light and view. The shade is supplied by the ever changing nature around it, the canopy of the trees, the mountains...

The prefabricated unit is easily transported to remote places and fast assembled due to its modularity and division into small identical sections. The conversion of the Fakro Arc roof-window system into a facade element allows for a completely flexible space. Each facade element can be fully or partially opened or closed, providing the chance to blur the border between inside and outside as well as protecting the resident from the wilderness.

Enjoy the silence...
